Doctoral Programme of Computer Science

Telephone	: (0274)546194
Email	: s3ik.mipa@ugm.ac.id
Website	: http://dcse.fmipa.ugm.ac.id/site/id/s3-ilmu-komputer/

Module name	: **D**ISTRIBUTED **S**YSTEM
Module level, if applicable	: **D**OCTORAL
Code, if applicable	: MII7655
Semester(s) in which the module is taught	: 1 (Odd)
Person responsible for the module	: Dr.-Ing. Reza Pulungan, M.Sc.
Lecturer(s)	: Dr.-Ing. Reza Pulungan, M.Sc., Dr. Mardhani Riasetiawan, S.E. Ak, M.T.
Language	: Indonesia
Relation to curriculum	: Doctorate; elective; 1st or 3rd semester.
Credit points	: 3 credits
Type of teaching, contact hours	: Doctorate: lectures for < 5 students. Contact hours are lecture hours.
Workload	: (1) Lectures and discussion: 3 x 50 = 150 minutes (2.5 hours) per week. (2) Exercises and assignments: 3 x 60 = 180 minutes (3 hours) per week. (3) Independent study: 3 x 60 = 180 minutes (3 hours) per week.
Requirements according to the examination regulations	: A student must have attended at least 75% of the lectures to sit in the exams.
Recommended prerequisite	: -
Module objectives/ intended learning outcomes	: This course is a postgraduate level course of distributed system. At the end of this course, students do not only gain deep insights into how distributed and cloud systems work, but also understand the fundamental theory underlying cloud computing, contemporary research, engineering challenges and how recent cloud computing technologies are used in practice. After completing this course, students are expected to: CO1: Analyse research development of a specific field of distributed system in a technical manner, including logical time, consistency, transactions, fault tolerance, quorums, replicated state machines, atomic commit, dan peer-to-peer systems.

	CO2: Substantiate the analysis using existing scientific knowledge in the field of distributed system and write down the analysis systematically in an essay. CO3: Evaluate a substantiated analyses of others. CO4: Synthesize and create a new research plan in the field of distributed system with an adequate novelty.
Content	: This course focuses on the theoretical underpinnings and technologies that provide foundations to distributed and cloud systems. The course will especially concentrate on the fundamental algorithms in distributed systems, the architecture of cloud computing's client systems, the architecture of modern cloud data center, and technologies used in the cloud. Specifically, main interests are on the cloud components in the first and second tiers of cloud systems focussing on their elasticity, scalability, and responsiveness
Study and examination requirements and forms of examination	: Evaluation is done in 3 forms, namely: 1. Two examinations, mid-term and final, 2. A modelling assignment, and 3. A short review paper on state-of-the-art methods in formal methods. Assessment is done using benchmark assessment, with the aim of measuring the level of students' understanding related to the target and class rank.
Media employed	: LCD, blackboard, and websites.
Reading List	: 1. Birman, K.P., Guide to Reliable Distributed System: Building High-Assurance Applications and Cloud-Hosted Services, Springer, 2012. 2. Lynch, N. A., Distributed Algorithms, Morgan Kauffman, 1996. 3. Hwang, K., Dongarra, J., dan Fox, G.C., Distributed and Cloud Computing: Clusters, Grids, Clouds, and the Future Internet, Elsevier, 2012. 4. The PLO of DP-CS

PLO	Knowledge Area	PLO Description
PLO1	[Values and principles]	A graduate should be devoted to God Almighty, uphold the humanity values, internalize academic values and ethics, responsible in working around expertise independently.
Managerial Capability		
PLO2	[Professional attitudes]	A graduate should have good interpersonal skills; able to work together within the organization, both as a leader and a member; able to be the initiator; able to manage and delegate tasks; and have a sense of responsibility for their own work as well as take responsibility for the achievement of the organization's work.
PLO3	[Communication skills]	A graduate should be able to communicate effectively and efficiently with stakeholders from various backgrounds; use English well; and able to write and present scientific papers correctly and well.
PLO4	[Life-long learning]	A graduate should be up to date with the state-of-the-art especially in computer science field, able to take parts in the development of computer science field that is engaged in and relate it to other fields throughout life.
Working Capability		
PLO5	[Problem-solving and Scientific skills]	A graduate should be able to analyse science and technology problems in the computer science field, develop alternative solutions through intra disciplinary, interdisciplinary, and trans disciplinary approaches to produce innovative, original, and tested works.
PLO6	[Ability to formulate and do research]	A graduate should be able to formulate research problems through critical, exploratory, and innovative studies both independently and in groups of computer science field that is engaged in and present research results in a scientific paper at regional or international level.
Mastering Knowledge		
PLO7	[Fundamental knowledge]	A graduate should be able to develop knowledge in the field of computer science that is engaged, which includes abstraction, complexity, evolution and philosophy of changes or developments in the field of science.
PLO8	[Applied knowledge]	A graduate should be able to develop theoretical, philosophical, and applied concepts in the field of computer science that is engaged in, and to represent them in a structured and systematic manner.
